

Howto use the “WEDD”?

What is WEDD?

As a new project add-on to the current release, we formed a Wind Energy Document Database. Registered users can make queries on the database, which includes wind energy related documents in PDF format. (Trial user can make queries but cannot download PDF files)

Database is repository for reports, papers, descriptions, documentation, brochure and other materials related to the Database on Wind Characteristics. Furthermore we encourage people to store and/or publish reports and papers with description of their work in the Wind Energy Document Database with relevance to wind energy research. Please remember to include your name, affiliation, corresponding address (Email) and proper references to other papers of interest.

How do I make a query?

Search engine uses a simple method to make queries. Here are some examples;

Denmark DTU

This query returns with the documents contain words "Denmark" OR "DTU".

+Denmark +DTU -annual

This query returns with the documents contain words "Denmark" AND "DTU" at the same time but which does NOT include word "annual".

Is there another way to reach the database?

No, but you can use different front ends to access faster. Currently there are 2 different front ends for IE 5.5+

WindEnergy DocDB: Go to HELP page at WEDD and right click on this link and add to your favorites.

Search Bar: Go to HELP page at WEDD and copy this link to your web site and get fast access to database.
